

Project Overview

Centrefy is a transformative healthcare management platform that enables businesses in the care sector to enhance the quality of care delivery through advanced technology. The platform offers a centralized solution that improves efficiency by streamlining care coordination, automating tasks, and ensuring compliance.

Key Challenges

- Ensuring seamless integration with existing care management tools while preventing data loss.
- Creating an intuitive interface accessible to all staff levels, avoiding overwhelming complexity.
- Building a platform that can grow alongside the business without compromising performance.

Possible Solutions

Victor analyzes patterns related to elevated hospitalization & medication nonadherence risks and predicts deterioration.

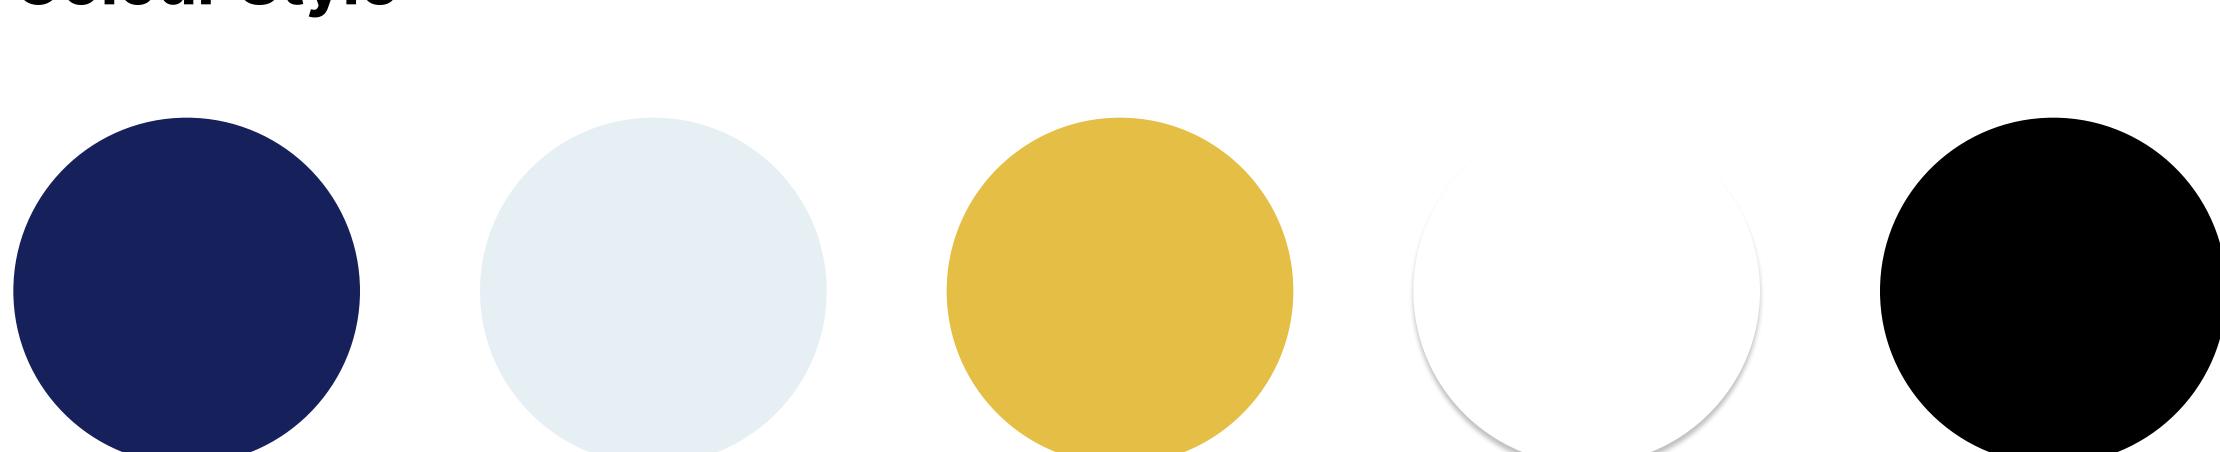

The app was built using React Native for crossplatform functionality and Node.js for a robust backend. Cloud-based architecture was implemented to support future scalability. Custom APIs were developed to ensure smooth integration with third-party tools, and the user interface was designed with simplicity and ease of navigation in mind.
